

Relief

Calcium Eliminator

Part of CLC SYSTEM

Relief is a unique, fast acting calcium eliminator. Relief is formulated to resolve calcium build-up on lithographic printing rollers. Calcium carbonate is often used as filler in producing alkaline papers during manufacturing. Relief provides the ideal blend of ingredients to inhibit and eliminate the build-up of calcium, surfactants and paper coatings on litho rollers & blankets. When Relief is used as part of a routine maintenance schedule, calcium will not accumulate.

- Quickly removes calcium carbonate
- Improves ink roller transfer
- Inhibits calcium build-up
- Counteracts surfactant adhesion
- Low odor
- Use on litho rollers and printing blankets

Directions of Use:

Rollers & Blankets: Wash up with a typical Allied Roller Wash to remove ink. Apply a liberal amount of Relief to the top roller to wet the entire roller train. Allow Relief to oscillate throughout the roller train for 5-10 minutes, allowing for calcium to disperse & disintegrate. To decalcify blankets, saturate a shop towel with Relief and wipe entire blanket.

Ask your distributor or Allied about other dedicated CLC System Products:

A coordinated pressroom chemistry program designed to control calcium and surfactant contamination across the fountain loop, plates, blankets, rollers, wash system, and fountain solution.

***Important Note: Shake Well Before Use!**

Specifications

VOC Content lb / gallon	0.24
VOC Content grams / liter	29
Flashpoint	200 °F
Color	Colorless
CA Compliant	Yes
