

Roller Lube

Anti Friction Dead Unit Lubricant

When one or more units of a multicolor press run in a non-printing mode, the inking rollers can generate significant heat due to internal friction, which greatly shortens roller life if it occurs frequently. Roller Lube is formulated for this operating condition, using friction-reducing components to prevent roller overheating and conditioners to preserve the ink transfer.

- Prevents friction build-heat build up
- Conditions the rollers as it protects
- Easy to remove
- Extends roller life

Directions of Use:

To Protect Non-Printing Press Units: Apply directly to the ink roller train; ensure sufficient is applied to thoroughly coat each roller. To Remove: Wash up as if performing a standard color wash.

Specifications

VOC Content lb / gallon	0
VOC Content grams / liter	0
Flashpoint	> 400 °F
Color	Colorless
CA Compliant	Yes
